

Certification Steps- Students

How do students get certified?

Certification as a Siemens Certified Mechatronic Systems Assistant, Associate, or Professional is not only a great way to show employers and peers that your skills are internationally certified according to the highest industry standards, but also that you have much more than advanced technical knowledge: you have *handlungskompetenz*. Sounds *wunderbar*, right? So how do you get certified?

Certification in three steps

Step 1: To get your Siemens certification, first find an SMSCP partner school. This is an elite program, so you won't find them everywhere! Contact the SMSCP using the information at the bottom of the sheet if you need help.

Step 2: Take the courses! It's not enough to cram—you have to do the work! The reason: Siemens certification exams check much more than your technical knowledge—they test your systems thinking.

Step 3: Register through your school and take the exam! If you pass, you'll get your new certificate in a couple of weeks.
